

EMPLOYMENT

Generative AI Intern	Infotact Solutions	Mar 2026 – Jun 2026
<i>Atlas Tutor – AI-Powered RAG Learning Platform</i>		
- Built a RAG-based tutoring platform (Next.js, FastAPI, Gemini 2.0, ChromaDB) that answers student queries with context-aware, citation-backed explanations from uploaded academic documents. - Designed an adaptive quiz engine that retrieves topic-specific context and auto-generates 5-question multiple-choice quizzes per topic to test understanding and track progress. - Implemented role-based access (Student/Admin) with an admin upload center that chunks, embeds, and indexes subject-wise PDFs into the vector database.		
<i>DocuFlow AI – Multi-Agent Document Generation Workflow</i>		
- Architected a stateful multi-agent workflow (LangGraph) with a Writer agent (Gemini) and a Critic agent (Llama 3.3 70B via Groq) that drafts, scores, and revises documents, auto-deploying only when the Critic score reaches 95/100. - Implemented pgvector semantic retrieval using Gemini embeddings truncated to 768 dimensions via Matryoshka Representation Learning (MRL), preserving 98%+ retrieval accuracy while speeding up similarity search. - Built a circuit-breaker and human-in-the-loop review gate that caps automatic revision cycles at 3 and routes every subsequent draft to manual approval before deployment.		
Technical Associate	Impaxive Solutions	Jun 2025 – Feb 2026
- Implemented Role-Based Access Control (RBAC) for the Recupe product, restricting feature access across the application through defined user-role permission tiers. - Developed and maintained the corporate website for client Apollo Microsystems Limited. - Built a RAG-based chatbot grounded in company documentation to automate customer and internal query resolution. - Automated internal workflows using n8n, integrating multiple services to cut manual, repetitive tasks.		
Student Mentor	NxtWave	Jan 2025 – Jun 2025
- Resolved technical doubts and reviewed code submissions for 250+ students across fullstack development courses. - Mentored students through live debugging sessions to reinforce core programming concepts, and clarified course material to bridge lecture-to-assignment gaps.		
Fullstack Trainee	NxtWave	Oct 2023 – Dec 2024
Built multiple MERN stack (MongoDB, Express.js, React, Node.js) projects covering authentication, REST APIs, and responsive UI, gaining end-to-end experience from database schema design to deployment.		

EDUCATION

Dharwad, Karnataka	Indian Institute of Information Technology, Dharwad	Aug 2019 – Jul 2023
B.Tech in Computer Science and Engineering.		

TECHNICAL EXPERIENCE

Projects

- AI Atlas Platform** (GitHub). Full-stack AI-vendor intelligence platform for Germany's F&B industry with a directory filterable across 4 dimensions (sector, company type, maturity, category), a grounded RAG assistant that answers only from indexed data, and automated news aggregation. Next.js, React, TypeScript, FastAPI, PostgreSQL (pgvector), Google Gemini.
- AI-Powered Support Assistant** (GitHub). RAG-based customer support chatbot that answers strictly from a local knowledge base to prevent hallucinations, with persistent 5-exchange session memory and IP-based rate limiting. React, Node.js/Express, SQLite, Google Gemini.
- Blog Application with GenAI Suggestions** (GitHub). JWT-secured blogging platform that uses Gemini to auto-generate 2 related topic ideas and 1 intro paragraph per draft. React, Node.js/Express, SQLite, JWT Authentication.

ADDITIONAL EXPERIENCE AND AWARDS

- AMD Slingshot Ideathon:** Participated in AMD's Slingshot Ideathon.
- Hack2Skill Virtual PromptWars (with Google):** Participated in the Virtual PromptWars challenge.
